

Firm Profile

Our Firm

Founded in 2004, Dennis J. Swart Architecture, PC (DJSA) is focused on establishing and maintaining long-term relationships with our clients and the industries we serve by providing exceptional personal attention and high-quality professional design services.

It is gratifying to think about the impact upon countless individuals who use our buildings every day. Our approach to fulfilling this responsibility is to listen closely to our clients, design beautifully functional spaces and integrate sustainable design practices. DJSA strives to maintain a positive, energetic and collaborative spirit with a talented and diverse group of professionals. It shows in the work we do and in the success we have had.

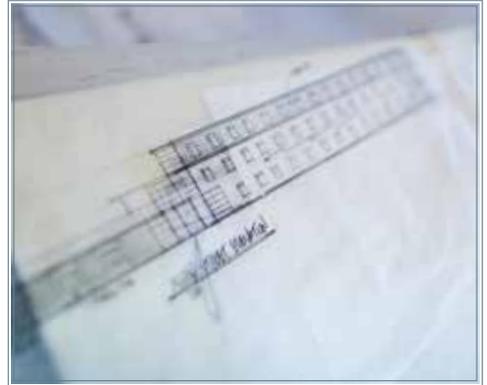

Services

DJSA is a full service architectural and interior design firm focused on bringing innovative design strategies to each project and client. We partner with a wide variety of clients in many market sectors. We have a broad portfolio that ranges from hospitality, retail, tenant fit-outs, office buildings, churches, fitness facilities and healthcare facilities.

Our services include all aspects of the design process, from conceptual design to construction observation. Our experience enables us to provide innovative, technically sound designs that work with our clients' budgets, schedules and design objectives.

Loyalty to our client and consultant partnerships is paramount and tracks through all aspects of our business approach. Trust earned through continued interaction and consistent attention to detail provides the basis for successful projects and lasting relationships.

DJSA is committed exclusively to utilizing Autodesk's Revit software on all our design and construction projects. Revit provides unparalleled scheduling, design, coordination, management, conflict resolution and overall documentation quality to strengthen the Architect's and Owner's leadership over the entire project. It also assists in consultant coordination, resulting in economic savings and time efficiency for the client. AutoCAD and Adobe Creative Suite are used in conjunction with Revit as necessary for project presentation.

Team Approach

As architects, we recognize that one of our most significant roles is to manage a process that may take years to complete and includes hundreds of individuals. We are Team Leaders with the responsibility of ensuring efficient utilization of all resources. Proper selection and management of engineers and consultants of all types are a key factor to the success of any project. We are experts in establishing and maintaining strong oversight and management of this process.

Our teaming approach and access to a wide range of consultants capture the best available expertise. We also work side-by-side with consultants selected by our clients, maintaining previously established strong relationships. Regardless, our knowledge and experience enable us to coordinate all disciplines involved with your project.
